

The HVACR industry is constantly evolving. Today's heating and cooling systems are far more advanced than those manufactured just 10 years ago. With advances in comfort and efficiency means new technology and tools to learn how to use properly. Don't miss out on an important opportunity! Set up a training session with one of our industry experts!

Combustion Class Topics Include

- How to use an analyzer
- Why perform combustion test and why use analyzers?
- Why do we need to measure?
- How contractors can make money (\$\$) using an analyzer
- Atmospheric vs. High Efficiency condensing boilers / furnaces
- Combustible gas leak detection: soap bubbles vs. actual detection

Virtural Training Available!

**Certified NATE Classes for
Combustion Analysis & Refrigeration**

Refrigeration Class Topics Include

- The refrigeration cycle
- Components in the refrigeration cycle
- Functions of different refrigeration lines
- Super heat & subcooling
- Basic troubleshooting
- Analog vs. NEW wireless manifold & smart probes
