# **Mobile Phone & Remote Tool Considerations for M&E in a COVID-19 Environment**

Wednesday, June 10, 2020

## Today's Agenda:

- **Arno Bratz, Mercy Corps** – COVID Context Monitoring, FIAT Style: Lessons Learned from the Mercy Corps DRC DFSA
- **Mehari Belachew, Kimetrica** – Transitioning to Mobile Data Collection: Lessons from L4R RMS Ethiopia
- **Amina Ferati, i-APS** – Monitoring Evaluation During COVID-19: What are M&E teams doing where there are no networks?

## Before we begin....

The webinar will last approximately 90 minutes

Use the **Q&A** box throughout the webinar to ask questions to the speakers. Use the **Chat** box to share your experiences and resources.

A recording of today's webinar will be shared with participants

# COVID CONTEXT MONITORING, FIAT STYLE

Lessons learned from the Mercy Corps DRC DFSA

**ARNO BRATZ**

MEL Manager, Mercy Corps, DRC DFSA

# Overview

1. FIAT approach for enhancing context monitoring
2. Framing anticipated changes
3. Identifying information gaps
4. Adapting monitoring strategies
5. Tooling and retooling
6. Initial results

# The FIAT approach for adapting monitoring systems

## 02 Identify Information Gaps

Identify and prioritize information gaps where monitoring data could help boost resilience capacities or responses to COVID.

## 04 Tool and Retool

Building on the existing monitoring ecosystem, create or change data collection flows to fill information gaps.

## 01 Frame Anticipated Changes

Frame the ways in which COVID is expected to affect TOC pathways and outcomes.

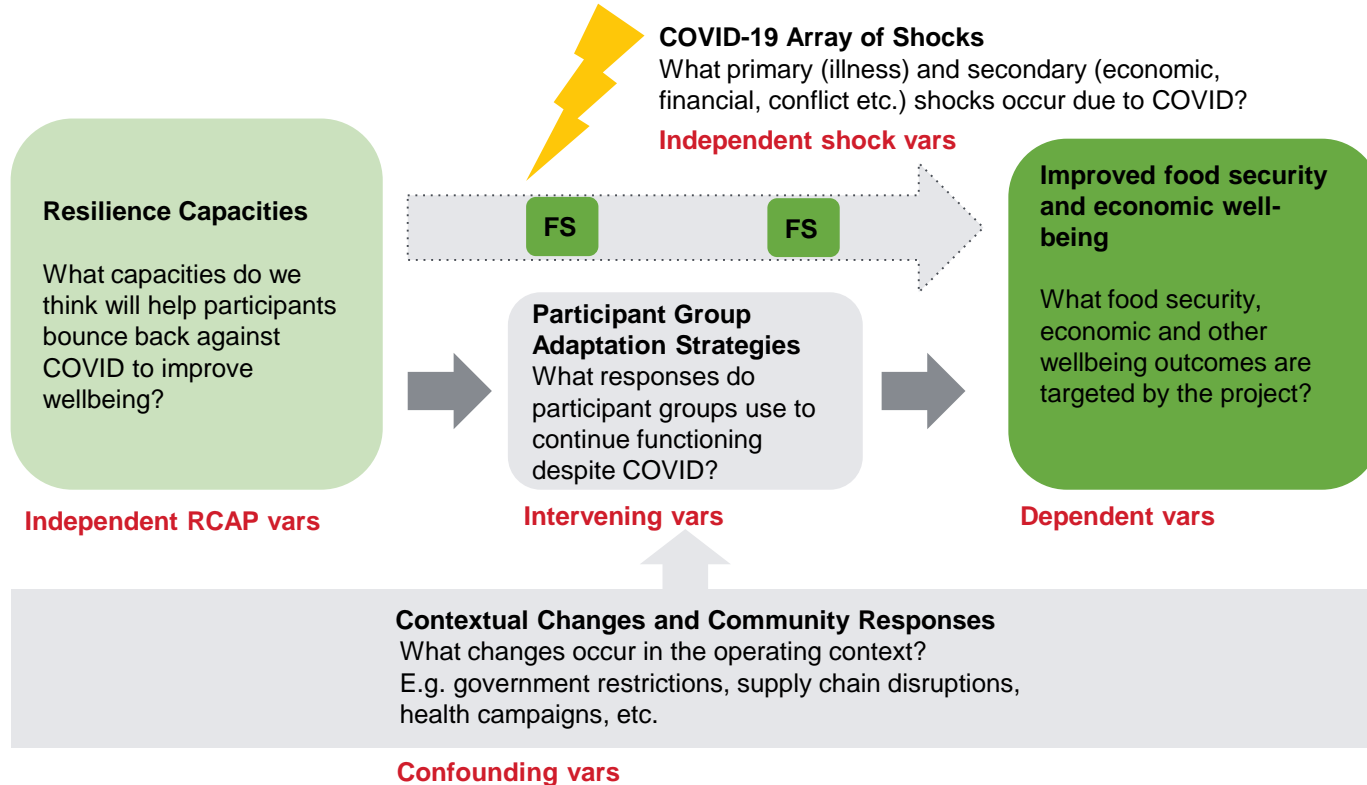

## 03 Adapt monitoring strategies

Adapt monitoring approaches to enable data collection despite changes in the operating context.

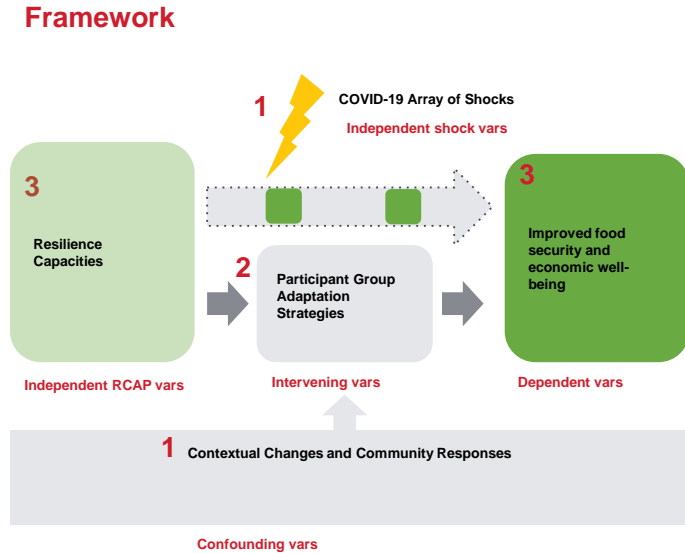

## 05 Analyze, Learn, Adapt

Analyze, learn, adapt implementation and context monitoring.

# 01 Frame Anticipated Changes

# 02 Identify and Prioritize Information Gaps

## Information gaps

1. **What is:** How does the COVID Array of Shocks affect markets, communities, participants and select participant groups?
2. **What works:** What resilience “responses” against COVID are key participant groups using?
3. **What matters:** What capacities are linked to reduced shock exposure, improved recovery and improved outcomes?

## Objective

Respond

Reinforce and share knowledge

Redesign

# 03 Adapt Monitoring Strategies

## Identifying remote monitoring methods:

1. **About who** do we need information?
2. **From whom** can we get it?
3. **How** can we reach them?

## Selecting right-fit methods:

1. **Fast:** Is a given method fast to set up, collect, analyze and act upon?
2. **Feasible:** Is it feasible to implement given cost and safety limitations?
3. **Precise:** Does it produce data precise enough to be actionable for decision-making?

# 03 Adapting Right-Fit Methods for Context Monitoring

		Phone Surveys		Phone Kills	
Dimension	Criterion	Self-selection through phone ownership	Phone distribution to representative sample	Kills with one stakeholder type, no triangulation	Kills with triangulation between stakeholders
<b>F</b> ast	Fast to set up	Yellow	Red	Green	Yellow
	Fast to collect	Red	Red	Green	Yellow
	Fast to analyze	Yellow	Yellow	Green	Green
<b>F</b> easible	Appropriate cost for required precision level	Yellow	Red	Green	Green
	Compliant with safety protocols	Green	Green	Green	Green
<b>P</b> recise	Appropriate sampling (varies by data demand)	Red	Green	Red	Yellow
	Triangulation	n/a	n/a	Red	Green

## 04 Tool and Retool

**Platform considerations** Build on existing platform environment. CommCare has a leg up for panel data, web forms and SMS functionalities.

**Retool where possible** It is easier to adjust existing tools and talk to existing stakeholders, rather than creating new data flows.

**Keep interviews short** Do not exceed 30 minutes. Factor in a 0.5 time lag due to connection issues. Split questionnaires, conduct more calls.

**Protect the equipment** Provide powerbanks to extension agents if needed so that their Android batteries won't be exposed to overvoltage

# 04 Tool and Retool

**Field quality control** Create specific phone interview guidance to reduce respondent interaction bias

**MERCY CORPS**  
**PHONE INTERVIEW CHECKLIST**  
 Prepared by: Yves Bassens and Arno Braet

This checklist aims at ensuring program and MEL staff to conduct high-quality key informant interviews using remote phone calls during the times of COVID where face-to-face contact with participants may not always be possible.

Health Zone: \_\_\_\_\_  
 Date Collection Tool: \_\_\_\_\_  
 Name of Data Collection Agent: \_\_\_\_\_

#	QUALITY CRITERIA	ABSENTEE	COMMENTS
<b>A. DATA COLLECTION PLANNING</b>			
B1	Design, document and verify a sampling methodology (if required) to facilitate respondent selection	<input type="checkbox"/> Yes <input type="checkbox"/> No	
B2	Compile a complete list of respondent names and phone numbers, including back-up phone numbers if possible	<input type="checkbox"/> Yes <input type="checkbox"/> No	
B3	Prepare a formal introduction to explain the reason for the call	<input type="checkbox"/> Yes <input type="checkbox"/> No	
B4	Prepare informal consent information and questions	<input type="checkbox"/> Yes <input type="checkbox"/> No	
B5	Get a headset with microphone and a microphone to use while you make calls	<input type="checkbox"/> Yes <input type="checkbox"/> No	
B6	Determine if it is necessary to record calls using your phone	<input type="checkbox"/> Yes <input type="checkbox"/> No	
B7	Do an exercise with a colleague: call, interview, record calls, modify your protocol if something isn't working	<input type="checkbox"/> Yes <input type="checkbox"/> No	
<b>B. BEFORE THE CALL</b>			
C1	Open the questionnaire in the collection software on your phone so that you can enter data on your computer	<input type="checkbox"/> Yes <input type="checkbox"/> No	
C2	Print the interview questionnaire Two people are available to cover the interview. A table takes and an interview facilitator. The table takes holds a notebook and pen with the paper questionnaire open.	<input type="checkbox"/> Yes <input type="checkbox"/> No	
C3	Make yourself comfortable: siting in your headset, sit in a comfortable seat, make sure both people are adequately seen and	<input type="checkbox"/> Yes <input type="checkbox"/> No	
C4	Have the list of respondent names and phone numbers ready	<input type="checkbox"/> Yes <input type="checkbox"/> No	
C5	Ensure that the Call Recorder application is installed on your phone	<input type="checkbox"/> Yes <input type="checkbox"/> No	
<b>C. DURING THE CALL</b>			
D1	Be VERY friendly! Greet the interviewee who you are calling	<input type="checkbox"/> Yes <input type="checkbox"/> No	
D2	Obtain informed consent	<input type="checkbox"/> Yes <input type="checkbox"/> No	
D3	If the interviewee is qualified, ask if you can record the call	<input type="checkbox"/> Yes <input type="checkbox"/> No

**MERCY CORPS**  
**CHECKLIST INTERVIEW PAR APPEL TELEPHONIQUE**  
 Préparé par : Yves Bassens et Arno Braet

Cette checklist a pour but de garantir la qualité des entretiens avec les informateurs clés en cette période de COVID où les contacts face-à-face avec nos bénéficiaires n'ont pas toujours été possibles, mais surtout de garantir que nous devrions agir et être aussi le plus efficaces pendant l'interview et après l'interview dans la collecte des données par appel téléphonique.

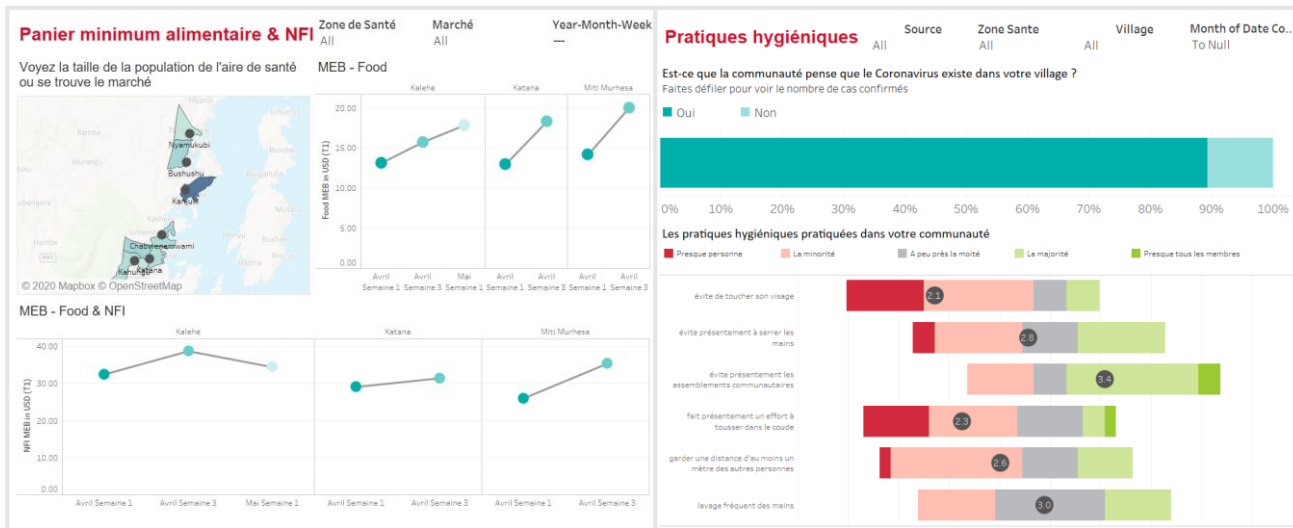

Zone de Santé: \_\_\_\_\_  
 Type de Collecte des Données: \_\_\_\_\_  
 Nom de l'Agent de Collecte: \_\_\_\_\_

#	ASPECTS A CONTRÔLER	COCHER OUI SI CELA EST FAIT	COMMENTAIRE NECESSAIRE
<b>A. PREPARATION DE LA COLLECTE DES DONNÉES</b>			
B1	Effectuer une méthodologie d'échantillonnage (si nécessaire) pour faciliter la sélection des répondants	<input type="checkbox"/> OUI <input type="checkbox"/> NON	
B2	Compiler une liste complète des noms et numéros de téléphone de toutes les personnes à interviewer	<input type="checkbox"/> OUI <input type="checkbox"/> NON	
B3	Préparer une introduction formelle pour expliquer le motif des appels	<input type="checkbox"/> OUI <input type="checkbox"/> NON	
B4	Préparer une question de consentement par téléphone et la personnaliser en fonction de l'acceptation de l'interview	<input type="checkbox"/> OUI <input type="checkbox"/> NON	
B5	Préparer un script de consentement et un script à utiliser pendant que vous prenez ou appelez	<input type="checkbox"/> OUI <input type="checkbox"/> NON	
B6	Déterminer si vous pouvez (et comment) enregistrer les appels en utilisant votre téléphone	<input type="checkbox"/> OUI <input type="checkbox"/> NON	
B7	Faire une expérience avec un collègue - appelez, interviewez, enregistrez les données, modifiez votre protocole si quelque chose ne fonctionne pas	<input type="checkbox"/> OUI <input type="checkbox"/> NON	
<b>B. AVANT DE FAIRE L'APPEL TELEPHONIQUE POUR LA COLLECTE</b>			
C1	Ouvrir le questionnaire dans le logiciel de collecte sur votre téléphone	<input type="checkbox"/> OUI <input type="checkbox"/> NON	
C2	Être très très sympathique! Deux personnes sont disponibles pour couvrir l'interview. Un premier de nom et un facilitateur de l'interview. Le premier des noms obtient et consigne et un stylo avec la grille questionnaire papier	<input type="checkbox"/> OUI <input type="checkbox"/> NON	
C3	Être très très sympathique! Deux personnes sont disponibles pour couvrir l'interview. Le premier des noms obtient et consigne et un stylo avec la grille questionnaire papier	<input type="checkbox"/> OUI <input type="checkbox"/> NON	
C4	Être très très sympathique! Deux personnes sont disponibles pour couvrir l'interview. Le premier des noms obtient et consigne et un stylo avec la grille questionnaire papier	<input type="checkbox"/> OUI <input type="checkbox"/> NON	
C5	Assurez-vous que l'application Call Recorder est installée sur votre téléphone	<input type="checkbox"/> OUI <input type="checkbox"/> NON	
C6	Assurez-vous que l'application Call Recorder est installée sur votre téléphone	<input type="checkbox"/> OUI <input type="checkbox"/> NON

# Transitioning to Mobile Data Collection: Lessons from L4R RMS Ethiopia

Mehari Belachew, Head of Surveys

June 10, 2020

## AGENDA

- Objective
- Background
- Key Successes
- Essential Preparatory Activities
- Lessons Learned

## OBJECTIVES

- Share lessons from Kimetrica's experience **transitioning** to phone-based interviews

- **Integrate learning** into other Kimetrica surveys in Ethiopia and elsewhere

## BACKGROUND

- Kimetrica recently conducted a telephone data collection in Ethiopia (May 2020).
- This survey is part of a Recurrent Monitoring System (RMS) that follows **900 panel households** every quarter since August 2019
- The first three rounds were conducted via **face-to-face interviews**
- The **Telephone-based data collection** was implemented for the 4th RMS round as a COVID-19 adaptation strategy.

We obtained a **98.1 percent** response rate,  
which is **higher** than the previous three RMS  
rounds done via face to face interviews.

## REASONS FOR SUCCESS

- Persistence and ability of interviewers to **phone back multiple times** (as opposed to few call backs on face to face interviews).
- Use of **local village guides** to facilitate on-ground coordination
- We had local administrators (**Kebele managers**) on standby for any challenges on the ground
- The RMS panel households had already been visited face-to-face several times in previous rounds, giving our interviewers a **solid acquaintance with the households.**
- We had allotted sufficient time and money to make all the necessary logistical and technical preparations in line with telephone data collection.

# ESSENTIAL PREPARATORY ACTIVITIES

- Exploring **availability of telephone network** in planned survey areas
- Establishing a **complete telephone directory** for sample households (from available data or other sources, like local government structures)
- Exploring if households have a **functional telephone apparatus**
- Exploring the **availability of electricity** or other options to charge phones, like solar means
- **Assigning focal persons** from within the sample clusters (community leaders, elders, chiefs, etc.) that can help in filling potential gaps.

# ESSENTIAL PREPARATORY ACTIVITIES

- Liaising with focal persons on the ground:
  - To identify the **best spots** in the clusters for **telephone network**
  - To **fix interview appointments**, when direct call doesn't work
- **Securing ethical approvals** from relevant authorities
- **Informing respective government structures** about the survey and the modality of data collection, through email, voice calls and text messages and documenting communications
- Ensuring that **interviewers have smartphones or tablets** to conduct the data collection.
- Availing sufficient **airtime**

**Mobile data collection is a viable alternative  
with the correct preparation**

# LESSONS LEARNED: PREPARATION

- Prearranging to **use the local guide's phone** for those households that do not have a phone
- Prearranging **interview date and time** with households:
  - To sufficiently charge their batteries.
  - To be in a ready mode for the interview (like, position themselves in the best network spot, arranging a convenient interview environment/privacy and confidentiality)
  - The call should not be a surprising one, while the respondents are in the middle of an important business.
- Interviewers must be **experienced, well-trained**, should **speak the local languages and know local contexts**
- Providing interviewers with **unlimited voice call subscription** to make multiple calls, as needed, and to take the necessary **time to complete their interviews**

# LESSONS LEARNED: DURING THE INTERVIEW

- Given the attention span of households and the inconveniences of phone data collection, interview **should not take over 45 minutes**.
- Providing respondents with **an incentive**, in the form of airtime, was found to help for a smooth interview. It also motivates households to remain in the panel for subsequent rounds.
- Securing **consent** from respondents and establishing good **rappport** at the beginning contributed to the smooth flow of interviews
- Since calls might drop off at any time in the middle of an interview (for battery, network or other reasons), informing respondents at the beginning to **call back** when they can was found to be helpful.

# LESSONS LEARNED: POST-INTERVIEW & COSTS

- **Daily review of data** entered by enumerators prior to uploading to server
- **Data quality checks at home office** for consistency, completeness and validity; and provision of **real-time feedback** on suspicious values
- **Never underestimate the costs** of phone interviews, **are not that much lower** than face-to-face due to:
  - **Takes longer to complete** survey – enumerator must often call multiple times/days
  - **More preparation work needed** – arranging for support on the ground (local guides, local administrators, etc.), building phone directories, verifying phone numbers, scheduling interviews, etc.
  - **Unlimited airtime and incentives** add to the costs

# #1 Do No Harm

GUIDE ON MONITORING, EVALUATION AND RESEARCH  
in Limited Resource Settings in the COVID-19 Context

June 1, 2020

## Key Considerations

1

**Do No Harm:** Care must be taken by actors at all levels (donors and organizations, third-party monitoring organizations, field staff and respondents) to minimize risk of transmission to themselves and others.

Add monitoring, evaluation and research activities to already planned program activities to minimize risk.

2

**Conduct a Risk Analysis:** Conduct a risk analysis of what monitoring activities are being planned, what data is needed, what activities can be postponed, for what purpose will data be used, and what data might be available to assess the impact of program activities.

Reduce data collection to the minimum necessary to answer monitoring, evaluation and research questions. E.g. avoid asking extra questions "just because you are doing a survey."

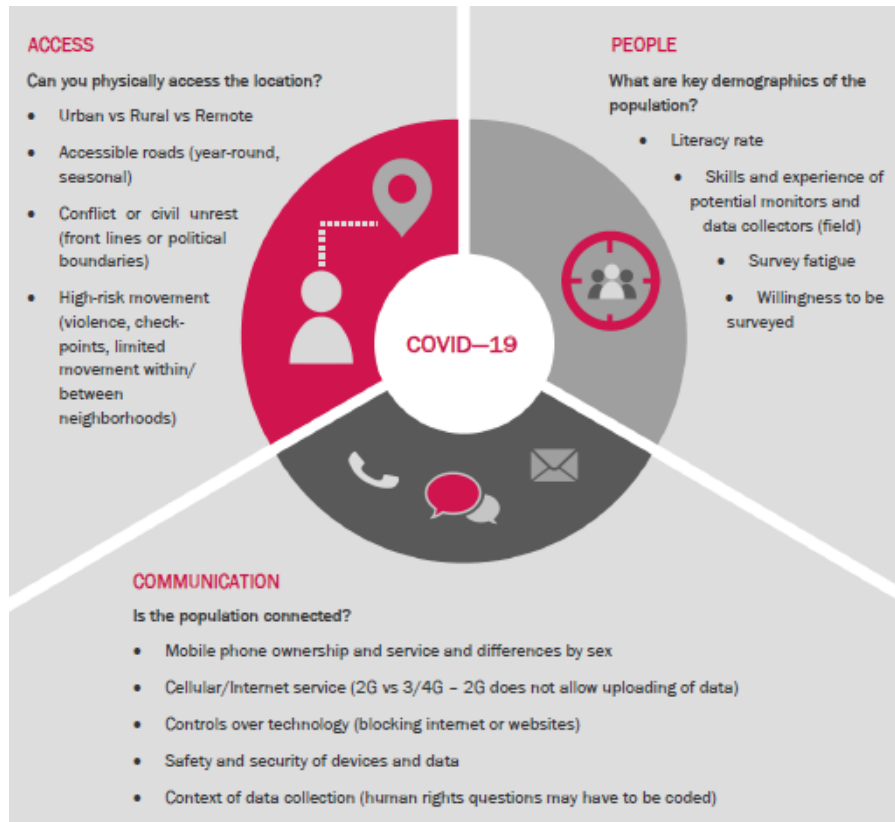

Select a minimum set of indicators or rotate data collection with different indicator sets to minimize physical contact with persons.

3

**Understand the Local Context:** Recognize that urban, rural and remote settings may be limited resource. Just because an area is urban does not mean that movement is unrestricted. COVID-19 compounds challenges already present in urban and rural and limited resource settings.

# #2 Consider Your Context

# #3 Options When there is Limited/No Connection

 <b>In-Person Data Collection</b>		
Option	Pre-COVID-19	COVID-19 Adaptions
Community Liaison/Focal Point as Data Collector	Identified Community Liaison/Focal Point utilizes existing phone (with Airtime provided) or is supplied with phone/tablet (prepaid SIM).	If Community Liaison/Focal Point did not have phone/tablet prior to COVID-19, consider impact that introducing the technology may have on the local community and integrate explanation for use to build trust.
	Phone/tablet has mobile-based survey tool (e.g. Kobo ToolBox) that allows for offline data entry.	<p>If there are multiple Community Liaisons/Focal Points in a single area, ensure individuals do not share phones as doing so can risk transmission.</p> <p>Follow social distancing local guidelines while conducting survey (mobile or paper) and maintain 2 meter distance. <sup>4</sup></p>
	Acts as a data collector to conduct survey via target audience using mobile device or paper with target audience.	<p>Conduct survey outside of dwellings (ideally outdoors) or in well-ventilated area, ensure privacy of responses, and ensure persons other than respondent do not congregate.</p> <p>Community Liaisons/Focal Point should consider wearing masks and encourage respondent to do so as well. <sup>5</sup></p>
	At agreed points, travels to site with cellular and/or internet service for data upload.	Paper surveys: COVID-19 requires adaptations to minimize risk of transmission given potential physical contact with survey data (paper):
	Paper option of survey available in case of technology failure or used as primary method of data collection.	<ul style="list-style-type: none"> <li>Consider limiting the number of focal points to minimize the number of persons having contact with paper to minimize risk of COVID-19 transmission.</li> </ul>
	Transport of paper surveys via local transport to headquarters/regional office at routine intervals.	<ul style="list-style-type: none"> <li>Instead of distributing printed surveys to the target population (which has implications for literacy and requires assistance in completing them), have Community Liaisons/Focal Point conduct the survey on paper.</li> <li>Community Liaisons/Focal Point can take photos of paper surveys or use mobile-based scanner app to transfer paper survey to electronic format to minimize number of persons in physical contact with paper.</li> </ul>

# What Works – Adapting to COVID-19 in Yemen

## ACCESS

- Protracted conflict
- 63% population is rural
- North-South divide

## PEOPLE

- 51.1% literate

## COMMUNICATION

- 54% have phone with cellular service
- Authorities control internet access

## YEMEN

## CONTEXT

- 17m in need of urgent food assistance
- 17.8m in need of WASH

## COVID 19

- First case April 10
- 486 cases
- Stigma, fear of seeking care, destruction of health facilities

# What Works – Adapting to COVID-19 in Yemen

- ✓ Data collectors provided phones with Kobo ToolBox installed.
- ✓ Data collectors trained on COVID-19 precautions.
- ✓ Surveys conducted in-person with COVID-19 precautions (distance + PPE + sanitation) using Kobo ToolBox and storing data **offline**.
- ✓ Data collectors provide phones with data to field leads for transport to urban area with service and/or travel to service points for uploading.

YEMEN
