

# What 32,000 Nurses Want You to Know About Treating COVID-19

More than **half** 

report being short on or out of HEPA filters, PAPRs and hoods, N95 and surgical masks, full and partial face shields, isolation and disposable gowns, goggles and sanitizer

**68%** are worried about being short-staffed

**87%**

are very or somewhat afraid to go to work

**36%**

have treated isolation patients with TB and other infectious disease without proper protection

*Don't send me to the bedside with inadequate, recycled equipment to create some illusion [of protection]. It's unconscionable.*

**26%**

have severe challenges isolating vulnerable populations

**43%** have made their own PPE

**14%** have made sanitizer, goggles and shields

**50%** lack training to conduct COVID-19 testing

**Text THANKS to 20222 to Support Nurses**

This data was collected through a survey administered by the American Nurses Association to identify needs and observations from nurses working during the COVID-19 pandemic. Between March 20 - April 10, 2020, 32,174 nurses responded.
